WHAT / HOW / FOR WHOM

What will we produce?	An API-first data aggregation and integration middleware connecting restaurant POS systems with delivery platforms (Pyszne.pl, Uber Eats) to automate order flow and analyze waste analytics.
How will we produce it?	Agile cloud software development (SaaS model) using cloud server infrastructure (AWS/GCP), API connectors, and automated ML pipelines for predictive waste analysis.
For whom will we produce?	Multi-unit restaurant chains and franchise management groups operating in urban markets.

BUDGET — TOTAL €100,000

Use 1	Cloud architecture & API data infrastructure	€ 45,000
Use 2	Pilot implementation & on-site testing	€ 25,000
Use 3	Regulatory compliance, Legal & IP	€ 15,000
Cash reserve	unexpected maintenance lags, server cost surges, or pilot deployment delays	€ 15,000

5 EMPLOYEES — PRIMARY ROLES

1. The Lead Integration Engineer builds the POSbistro-Deliverect connector and will scale the infrastructure to support future POS systems and multi-aggregator integrations.
2. The Data Engineer manages current data acquisition and analytics to minimize food waste, and will evolve these systems into predictive AI models for long-term supply chain forecasting.
3. The Product Manager translates market guidelines into core features that eliminate delivery delays, and will lead future product expansions based on ongoing restaurant management needs.
4. The Customer Success Manager handles the initial 90-day multi-unit partner program, and will transition into driving long-term client onboarding, post-rollout retention, and ongoing account expansion.
5. The Business Development Lead oversees initial commercial partnerships and operations, and will direct future market expansion, enterprise scaling, and strategic alliance growth.

OPPORTUNITY COST

Best rejected alternative + benefit given up

Developing an all-in-one, proprietary on-premise POS and restaurant management system. We forfeit direct core POS licensing revenue, payment processing fees, and full ownership of the restaurant's primary fiscal register

MACROECONOMIC RISK + RESPONSE

Risk: High inflation, surging labor costs, and raw material price pressures in the restaurant sector leading to tightened IT budgets.
Response: Implement a low-entry-cost SaaS subscription model delivering immediate, measurable ROI through automated food waste reduction and labor hour savings

Assessment: 10 Academic Points · Company Value: -3% to +5%
